Product Information Sheet

44-030 D-SUB M2.6 thumbscrews (pack of 2)

DESCRIPTION

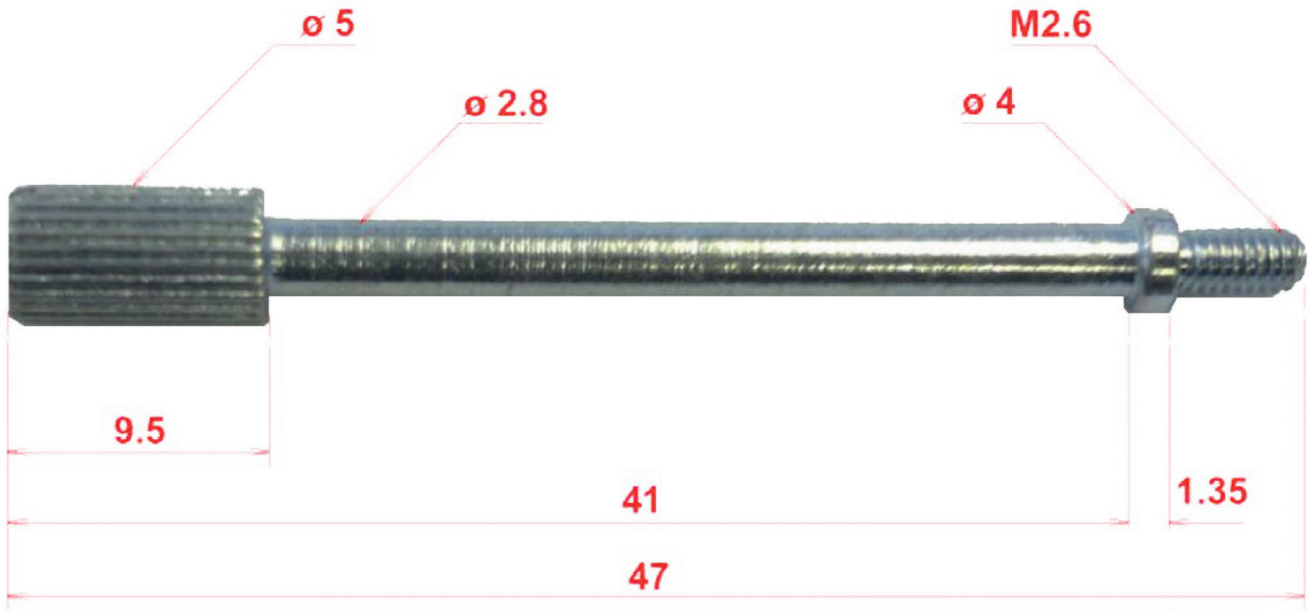

As some Japanese equipment manufacturers use a M2.6 thread to secure D-sub connections rather than the more common UNC4-40, the M2.6 thumbscrew can be used to replace the UNC4-40 thumbscrews supplied with 'deluxe' D-sub hoods/covers.

USAGE NOTE

These thumbscrews are only suitable for 'deluxe' D-sub hoods/covers supplied by Canford. We cannot guarantee suitability for other D-sub hoods/covers listed by Canford or other third party product sourced from other vendors.

COMPATIBLE HOODS/COVERS
