

## Technical Data Sheet

### TECPRO POWER SUPPLIES

**27-751** Tecpro PS751, Power Supply, Single Circuit.

#### DESCRIPTION

Tecpro Series 2 Power Supplies are designed to power small to medium sized Tecpro intercom systems where the facilities of a Master Station are not required.

The 2A supply is capable of driving up to forty BP531 belt packs and is protected by a compact, robust, extruded aluminium case. They are fully compatible with older Tecpro designs.

Series 2 power supplies are protected against short circuit and over-temperature. Protection is electronic and automatic and no resetting is necessary following removal of a fault condition. This new generation of PSU can be operated world-wide without the need to change power supply settings.

See 02-101 for old PS711 Power supply
